**NO TARIFFS IN TEXAS: ENERGY ACCESS INNOVATIONS  
LAUNCHES RENOVATED 310,000 SQ. FT. FACILITY IN TEXAS**

Commerce, Texas – Energy Access Innovations, led by founder James Showalter, proudly announces the opening of a newly acquired and renovated 310,000 sq. ft. manufacturing facility on almost 50 acres in Commerce, Texas—a major step forward in boosting American energy and jobs. This expansion, made possible by the success of EAI and President Donald J. Trump’s bold leadership, is a powerful move to bring manufacturing back to the USA and secure the nation’s energy future.

James Showalter, the East Texan who built Signature Solar into a leader in off-grid power systems, credited Trump’s America-First policies for driving this project. “Thanks to President Trump’s strong leadership, we’re investing big in American manufacturing,” Showalter said. “As a result of this vision, we’ve already purchased the land and facilities to make this operation happen—there’s nothing more American than making your own energy, and we’re doing it right here in Texas, creating jobs and strengthening our country.”

Showalter highlighted the stakes: “We have to stop being reliant on imports for critical things like batteries and power electronics. This facility is a step toward making these products domestically—keeping our energy secure and our economy strong.”

The impact is massive: over 1,000 new American jobs are coming to Commerce, Texas, revitalizing the local economy. With state-of-the-art technology and a focus on sustainable energy solutions, EAI projects 50%+ annual growth for the next three years.

“This facility is proof that President Trump’s policies deliver American jobs and investment,” Showalter added. “We’re making energy independence a reality, powering up our economy, and showing the world that America is back on top.”

Energy Access Innovations is proud to be at the forefront of securing America’s energy future, strengthening its economy, building a more energy abundant future, and standing alongside President Trump’s vision for American made energy.
